

Edison Micro Utilities was founded by William (Bill) Robertson in 1974. Edison which is located in Scottsdale Arizona has grown into a nationwide sub-metering, data collection and computerized billing service, serving manufactured housing and multi-family communities. With over 30 years experience Edison has mastered conservation and utility cost control strategies in both high and low-tech environments.

Bill has served on the Arizona MHI board and as a special consultant to the Board of Directors for the Manufactured Housing Association of Arizona.

Edison Micro Utilities is excited about the upcoming new utility software system. The system will provide a means for owners and managers to monitor the status of their park's billing and tenant changes via the internet. Managers will be able to produce a final utility move out statement to tenants immediately.
